

# SmartWater4Schools

SAVE UP TO **30%** OF YOUR IRRIGATION WATER

## AUTOMATION WITH AQUAMONIX

SWAN Systems and Aquamonix have partnered to provide schools with a complete closed-loop solution to manage water resources and turf quality.

Using SWAN and RainMan together can help you optimise water resources by working with available data and applying scientific algorithms to schedule and then irrigate exactly what's required for your situation.

## BENEFITS

## FEATURES

### DAILY SATELLITE IMAGERY

SWAN's daily satellite imagery tool is a powerful asset that will assist you in identifying areas of poor turf health and possible water leaks.

### MANAGE DAILY IRRIGATION

### MANAGE SEASONAL WATER USE

”

# SATISFIED CUSTOMERS

“...the software outputs, including the data from the soil moisture probe, have provided significant comfort to their grounds staff during hot weather as they have confidence in the outputs.”

- Greg Ingleton,  
SA Water

“Our objective is to provide a service to our clients where they get the best quality turf, with the minimum amount of inputs of water and nutrients, without having any detrimental effects on the surrounding environment. We would certainly recommend this technology to other people as we believe it will be of benefit for management of turf, in particular to ensure water management is spot-on.”

- Ken Johnston,  
Sports Turf Technology

“It takes the guesswork out of optimising water use. The modules for water budgeting, nutrient monitoring and management and for accessing satellite imagery to provide a plant health (or “greenness”) index (NDVI) were also extremely helpful.”

- Jim Dounas,  
Adelaide High School's  
Facilities Management Leader
